Before we start... approach and scope

SCOPE

Analysis: Mexico 2020 census of population

Objective: gain insight from observing data from different angles.

Limitation: will not include historical data, fertility, migration and other demographic information.

ANALYSIS BY ECONOMIC REGION

Census has three main categories: age, gender and states.

This analysis will be done grouping states by economic region

Why group by economic region? States are created by political circumstances (literally centuries ago). There are 32 states with a variety of characteristics. As introduction to the subject, we can gain more insight from seeing the dynamics as regions

Quick overview

Divided in:
4 economic regions
32 states
2,454 municipalities

126 million people
(1.6% world population)
64.5 million women, 51.22%
61.5 million men, 48.78%

1,964,375 km²

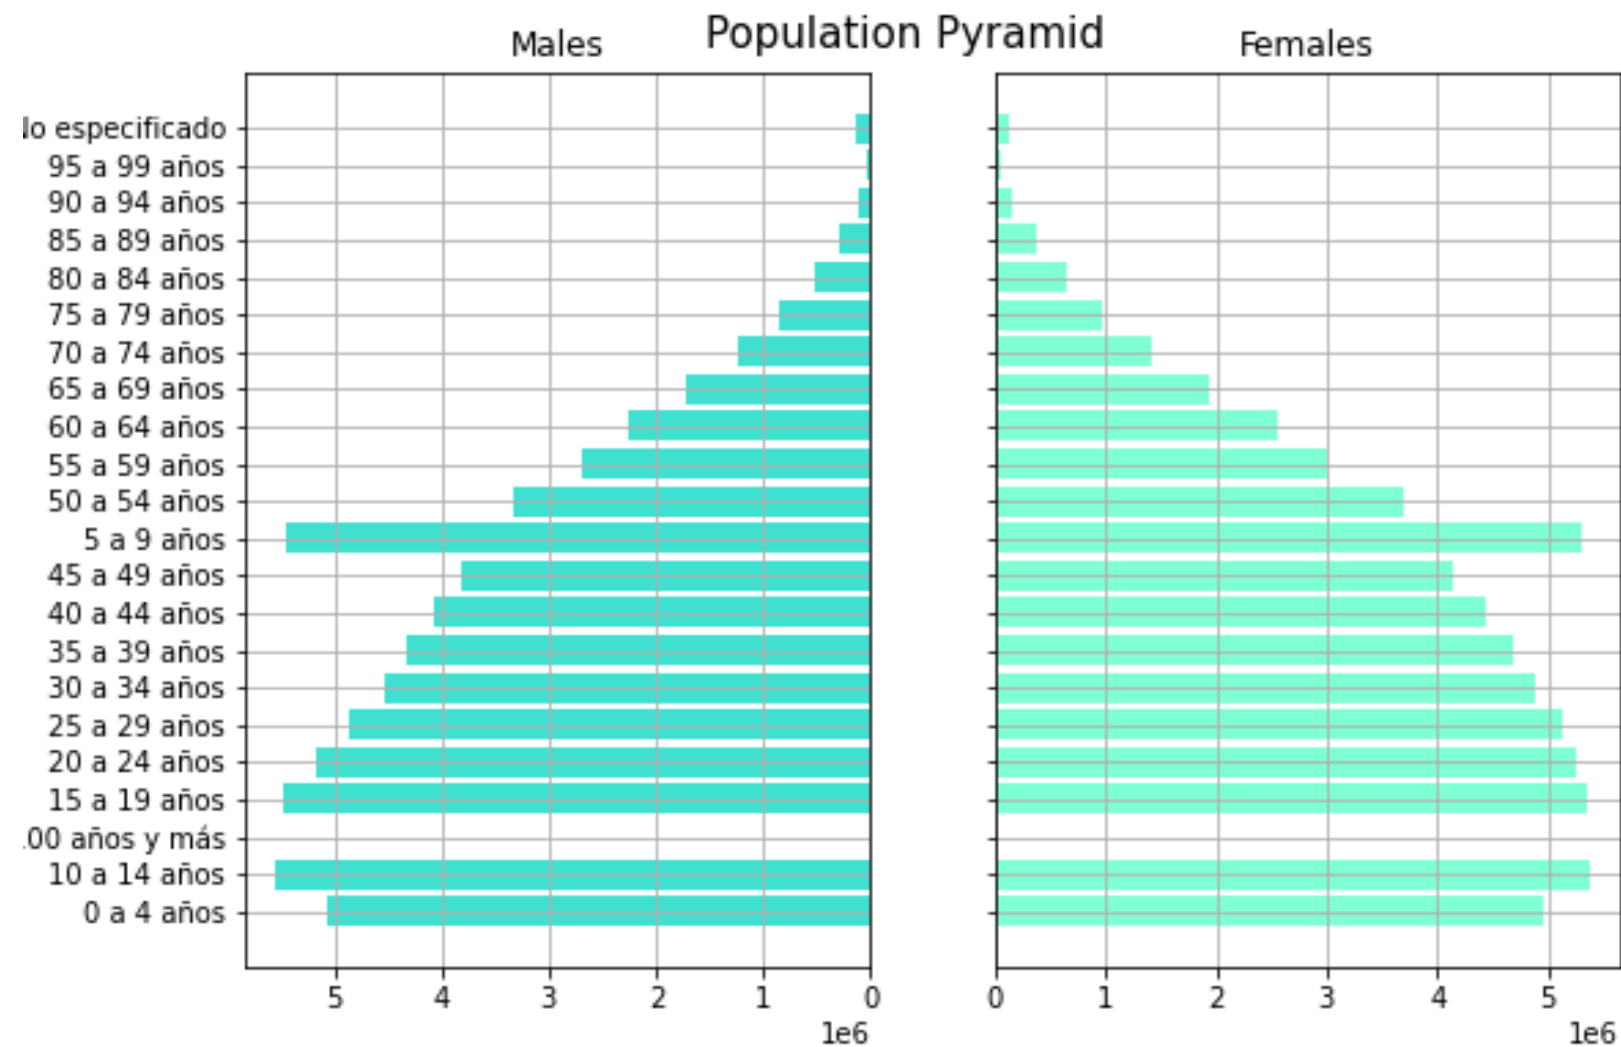

Trends

- 1 More men in early ages**
- 2 More women in middle ages**
- 3 Older in the north, more men, in proportion, as well**

- 4 More women in center region**
- 5 Younger in the south (in proportion)**
- 6 The older the population, less men in proportion**

ANALYSIS

Population Pyramid

total population:126 million
51% women, 49% men

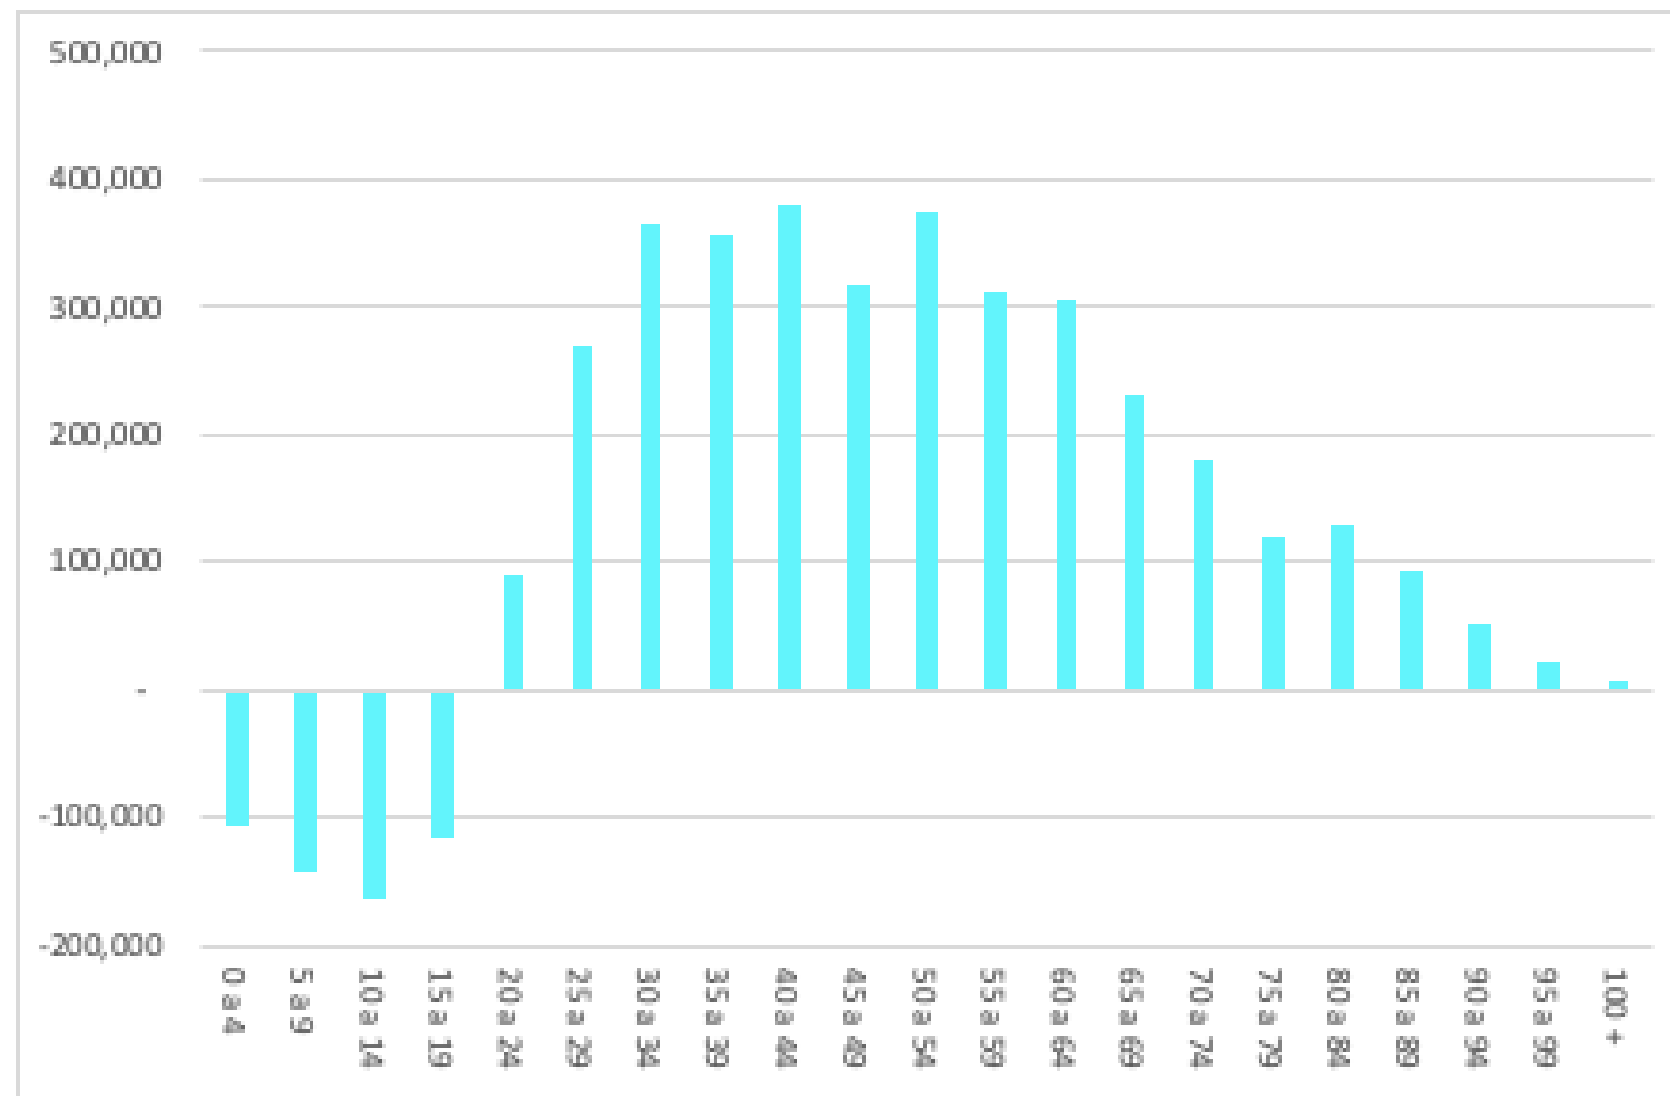

42.5 million (34 %) from 9 to 19 years old
38.9 million (31%) from 20 to 39 years old
34 million (27%) 40 to 64 years old
10.3 million (8%) 65 and above

25 million (20% total pop, 40% of total women)
women in fertile age

83.7 million (66% total population) in working age

Difference by age and gender

Difference (women - men) by age

From ages 0 to 10, there are **0.6 million** more men

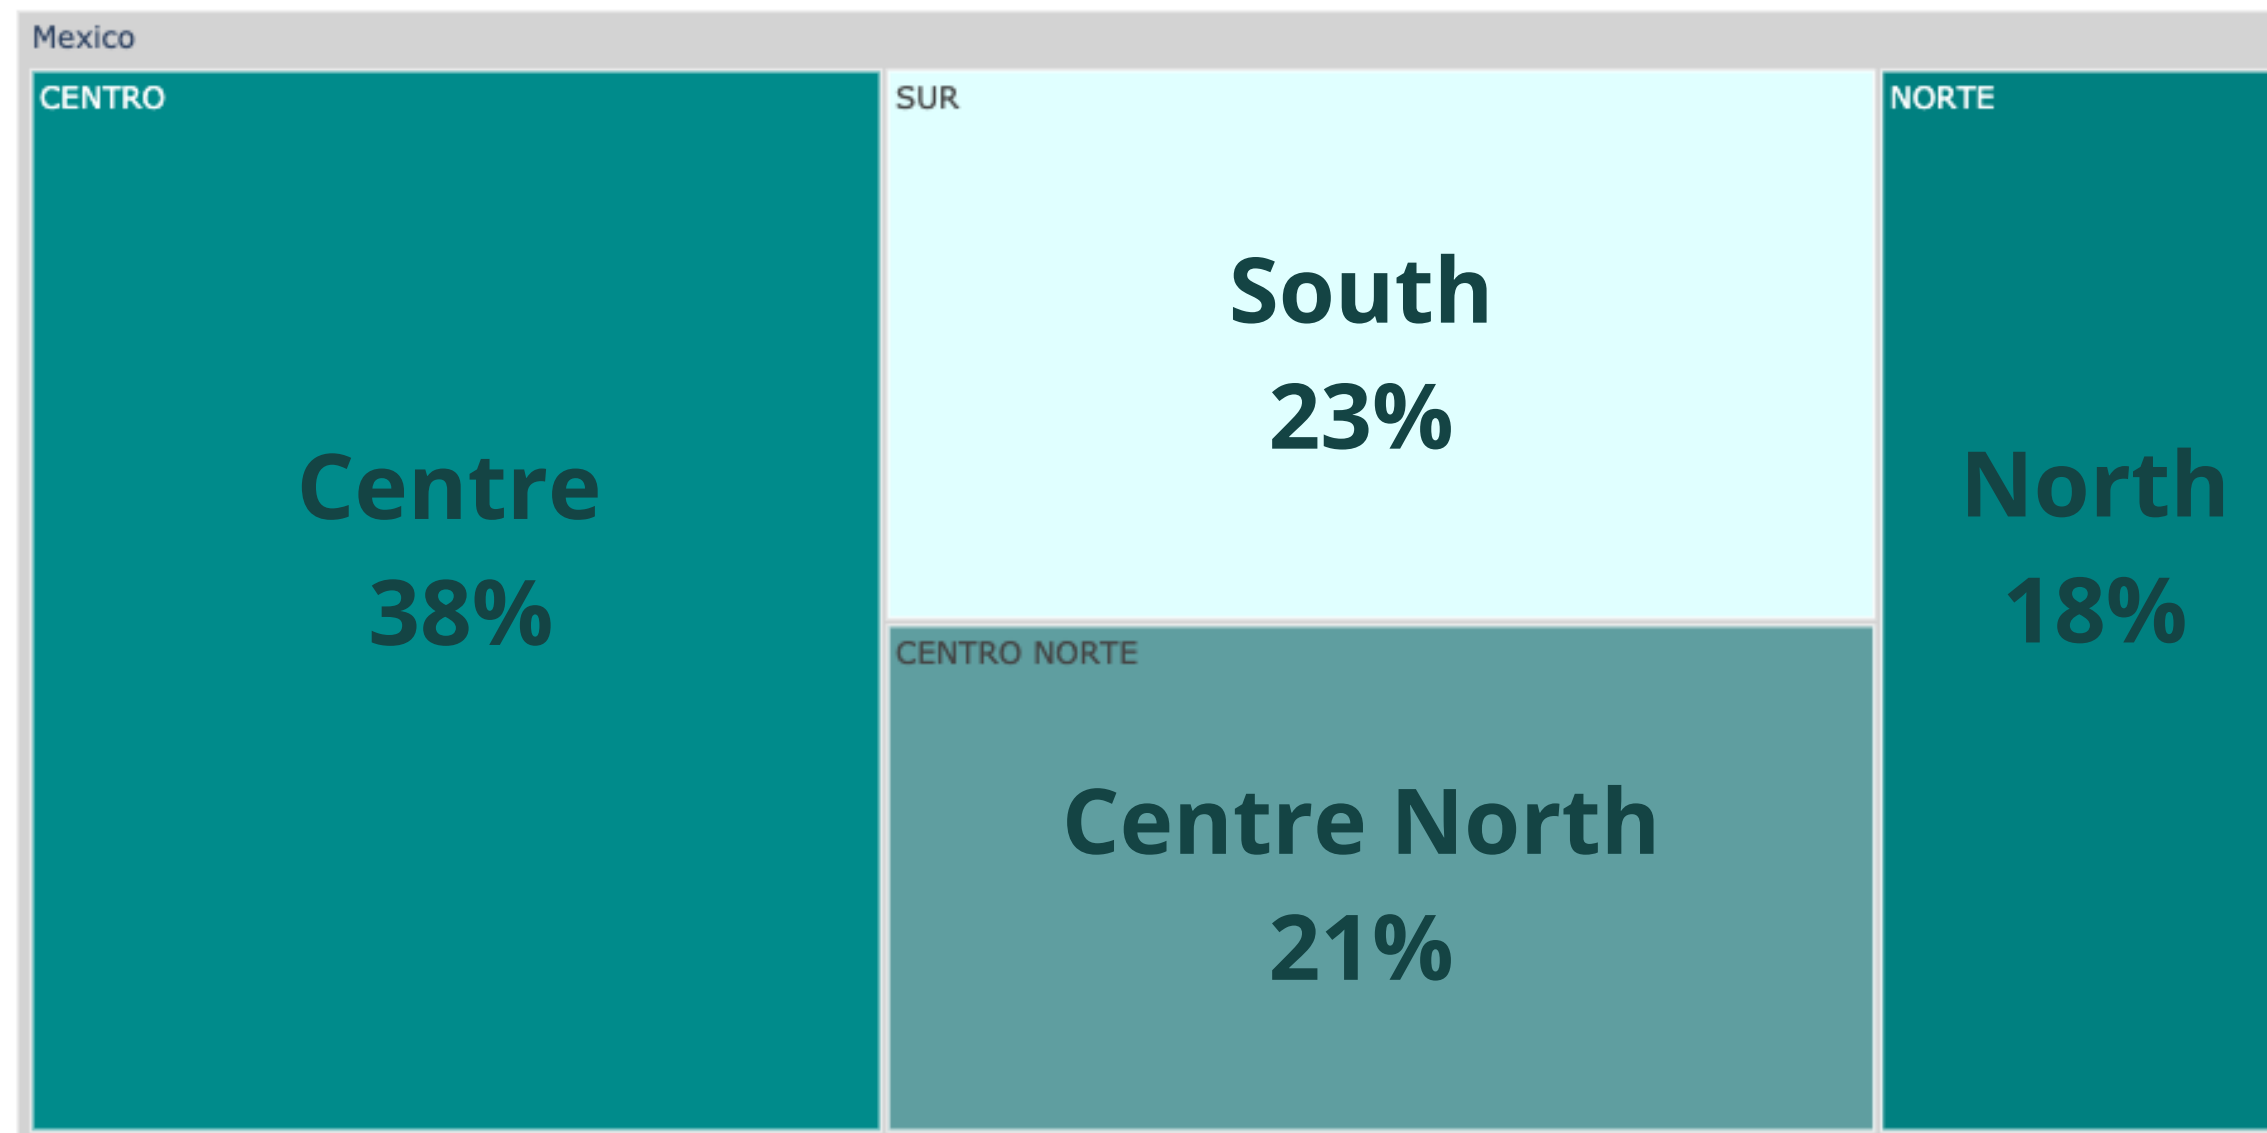

there are **3 million** more women
(represent 2.3% of total population)

From ages 20 and above, there are
3.6 million more women

by region

Population by region

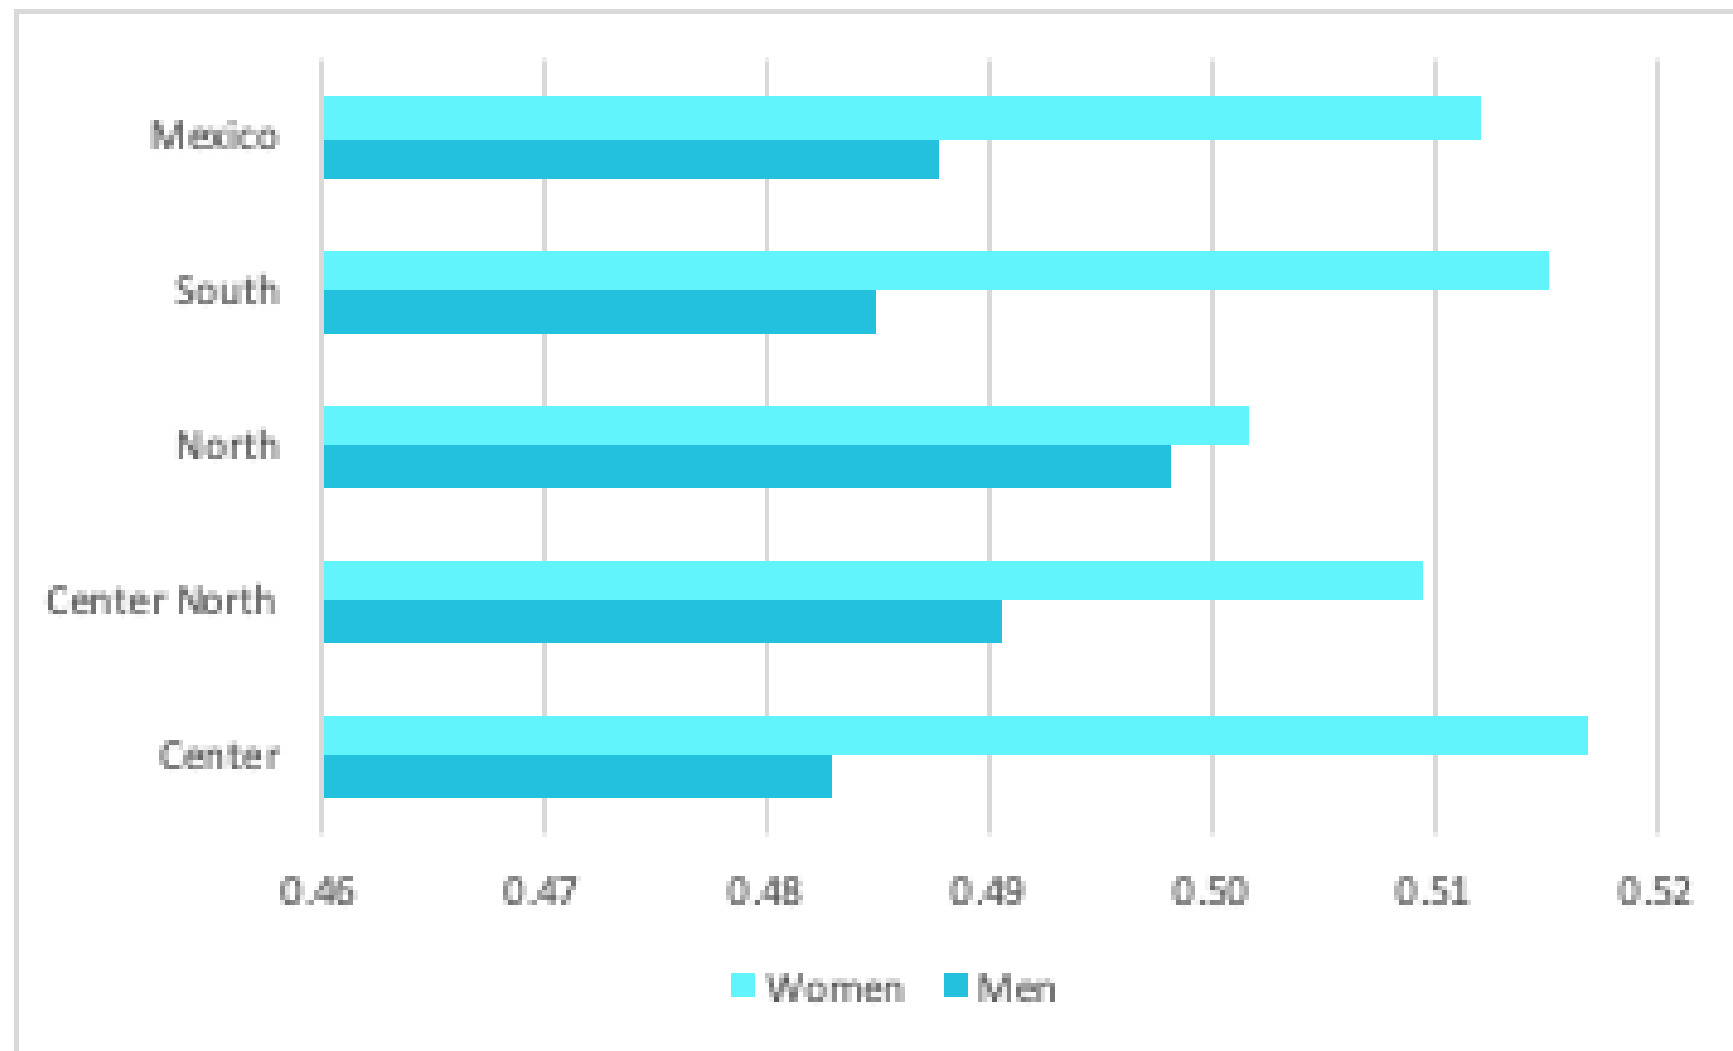

32 states ,4 regions

See annex for the list of 32 states

by region and gender

% distribution women/ men by region

MORE WOMEN

Mexico: +3 million (+3.4%)

South: +0.8 million(+3%)

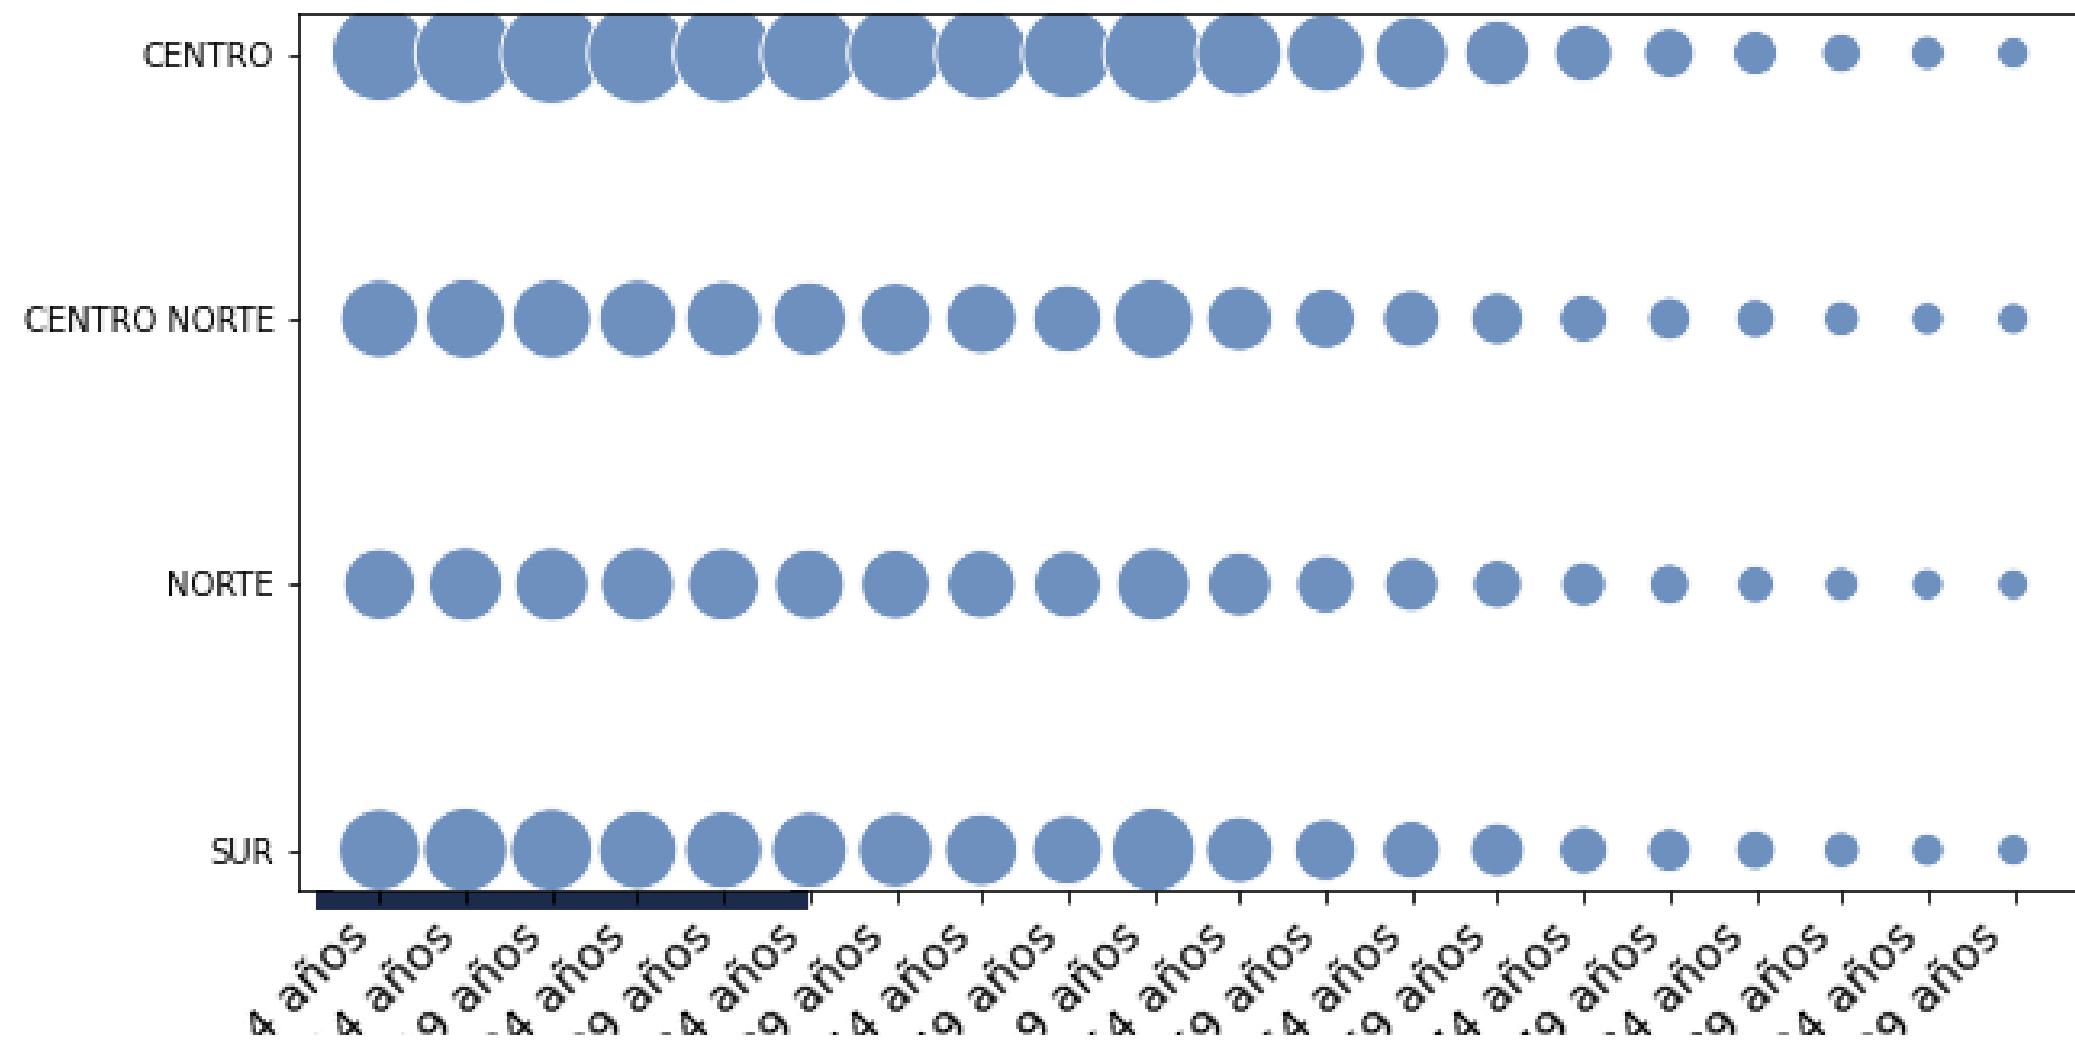

North: +0.08million (+0.45)

Center North: +0.5 million (+1.9%)

Center: +1.6 million (+3.4%)

by region and gender

population by age and gender

In proportion to their own regional pyramid, the south has the youngest population (25% vs 21% average nationwide)

Food for thought (and research)

More men in early ages 0.6 million more men from 0-19 age

More women in middle ages 3.6 million more women from 20 years and above

More women in center region 38% of women population lives in the central region

Younger in the south (in proportion) +3% in pyramid proportion vs. the rest of the regions

Older in the north, more men, in proportion, as well
